SELF-INTRODUCTION

B.Eng. undergraduate majoring in Automation at Tsinghua University with outstanding academic performance. My main research directions cover computer principles and AI algorithms. Proficient in underlying programming, embedded hardware debugging and lightweight AI model deployment, with solid theoretical reserves in computer system architecture, automatic control theory and machine learning. Eager to further explore intelligent control and vision-driven AI systems in relevant research or engineering positions.

EDUCATION

B.Eng. in Automation

Tsinghua University

Sept 2024 – Present

Beijing, China

GPA: 3.8/4.0, ranking Top 20% of major

Core Courses:

Data Structure

Computer Principles and Systems

Automatic Control Theory

Machine Learning

PERSONAL SKILLS

Computer Principles

Computer architecture

underlying program design

data structures

operating system fundamentals

AI Algorithms

Machine learning

lightweight model deployment

image processing

intelligent control algorithms

Tools Usage

C/C++

Python

circuit debugging

MATLAB/Simulink

STM32 MCU

OpenCV

English

CET-6

technical document comprehension

academic paper reading

academic communication

HONORS AND AWARDS

Second-class Entrance Scholarship

Tsinghua University

2024

Academic Excellence Scholarship

Tsinghua University

2024 – 2025

Second Prize, National Physics Competition for University Students in Partial Regions of China

Tsinghua University

2025

RESEARCH INTERESTS

Embedded Real-time System

Explore underlying hardware scheduling and driver implementation for resource-constrained embedded platforms.

Lightweight Edge AI

Investigate model compression, quantization and on-device inference algorithms for microcontroller deployment.

Vision-Driven Intelligent Control

Study the integration of computer vision and closed-loop control to build perception-based automatic control systems.
